Keep in mind

The Monetary Policy Report presents the Bank's technical staff's analysis of the economy and the inflationary situation and its medium and long-term outlook. Based on it, it makes a recommendation to the Board of Directors on the monetary policy stance. This report is published on the second business day following the Board of Directors' meetings in January, April, July, and October.

Starting in October 2019, the quarterly Inflation Report produced by the technical staff of the Central Bank will be known as the *Monetary Policy Report*. The document, which is used for the technical staff's monetary policy recommendation, will be published on the working day after the meeting of the BDBR in January, April, July, and October, simultaneously with the Board minutes.

Publication Date:

Friday, 24 January 2020

Monetary Policy in Colombia

As per its constitutional mandate, *Banco de la República* must ensure that the purchasing power of the currency is maintained in coordination with the general economic policy¹. In order to fulfill this mandate, the Board of Directors of *Banco de la República* (hereinafter BDBR) adopted a flexible inflation targeting scheme, by which monetary policy actions (MP) seek to lead inflation to a specific target and achieve the maximum levels of sustainable output and employment.

The flexibility of this scheme allows the BDBR to maintain an adequate balance between the achievement of the inflation target and the purpose of smoothing output and employment fluctuations around their sustainable growth path. The BDBR set a 3.0% inflation target based on the annual variation in the consumer price index (CPI). In the short term, inflation may be affected by factors that are not under control of the monetary policy such as changes in food prices due to climatic phenomena. To incorporate this, the BDBR announces, along with the inflation target, a ± 1 percentage point range (i.e., 3.0 ± 1 pp) which is not a target of the monetary policy, but reflects the fact that inflation can fluctuate around the target, and not always be equal to 3.0%.

The main instrument of the BDBR to control inflation is the policy interest rate (overnight repo rate, or benchmark interest rate). Given that monetary policy actions take time to have a full effect on the economy and inflation², in order to determine their value, the BDBR assesses the inflation forecast and inflation expectations vis-à-vis the inflation target, as well as the current situation and outlook of the economy.

The BDBR meets once a month, but it produces monetary policy decisions only in eight of its meetings (in January, March, April, June, July, September, October, and December). In the

remaining four months (February, May, August, and November), in principle, no such decisions are made³. At the end of the meetings where monetary policy decisions are produced, a press release is published and a press conference by the Governor of the Central Bank and the Minister of Finance is held. The minutes of the meeting describing the positions that led the Board to its decision are published on the following business day. Additionally, the Monetary Policy Report (MPR)⁴ produced by the Central Bank's technical staff is published in January, April, July, and October, together with the minutes. On the Wednesday of the week following the Board meeting, the Governor clarifies concerns about the minutes, and the Bank's Deputy Technical Governor presents the MPR. This dissemination scheme seeks to deliver relevant and up-to-date information that contributes to better decision-making by the agents of the economy⁵.
