
[Seminario de Microeconomía Aplicada - Cash Transfers and Formal Labor Markets : Evidence from Brazil](#)

[Seminarios y talleres](#)

El seminario de Microeconomía Aplicada del Banco de la República es un espacio para discutir trabajos en progreso en las diferentes áreas de la microeconomía aplicada como economía laboral, organización industrial, economía de la salud, economía agrícola, economía de la educación, desarrollo económico, crimen, economía pública, medio ambiente, economía regional y urbana, entre otras.

Joana Silva: a Senior Economist at the Office of the Chief Economist for Latin America and the Caribbean at the World Bank.

Resumen del documento: Cash transfer programs have expanded widely in developing countries and have been credited for sizable reductions in poverty. However, their potential disincentive effects on beneficiaries' labor supply have spurred a heated policy debate. This paper studies the impact of a large-scale program Bolsa Familia in Brazil on local labor markets in a context where such concerns could be particularly strong: eligibility is means-tested and the paper focuses on the formal labor market, where earnings are more easily verifiable. Yet, the analysis finds that an expansion of Bolsa Familia increased local formal employment, using variation in the size of the reform across municipalities. The evidence is consistent with multiplier effects of cash transfers in the local economy, which dominate potential negative effects on formal labor supply among beneficiaries.
