
[Seminario de microeconomía aplicada 13: Libor Misreporting as a Bayesian Game with Unobserved Heterogeneity](#)

[Calendario de actividades](#)

- University of Chicago y Banco de la República

Abstract: Libor is an estimate of interbank borrowing costs computed daily by regulators from a number of banks. This paper shows that the Libor rate is a Bayesian game with unobserved heterogeneity. It reports systematic misreporting that sending signals of creditworthiness seems to be the main
